Frequency converter:
Provides smooth speed control in the range from $20 \%$ to $100 \%$ (depending on the pressure set on the controller). Main benefits for the user:

- adjustment of the compressor capacity to the actual compressed air demand;
- reduction of the compressor pressure hysteresis, and thus reduction of pressure variation in the pneumatic network (electric motor rotation is regulated so that to keep the network pressure value on the constant, setlevel),
- minimization of mechanical wear and extending of the components working life;
- energy savings.

Microprocessor controler:
Clear display, information LEDs and straightforward keyboard provide easy and quick working parameters configuration, define compressor operating status, as well as compressor operating mode selection.
