Frequency converter	Provides smooth speed control in the range from 25% to 100% (depending on the pressure set on the controller). Main benefits for the user: adjustment of the compressor capacity to the actual compressed air demand; reduction of the compressor pressure hysteresis, and thus reduction of pressure variations in the pneumatic network (electric motor rotations is regulated so that to keep the network pressure value on the constant, set level in the range: min. 0,65 MPa, max. 1.0 MPa); minimization of mechanical wear and extending of the components working life; energy

savings.

Microprocessor control	Clear display, information LEDs and straightforward keyboard provide easy and quick working parameters configuration, define compressor operating status, as well as compressor operating mode selection.
Direct drive	1: 1 energy-saving drive, connects directly screw air-end to the drive motor without loss of power transmission, provides even greater compressor reliability and eliminates the need to replace belts while servicing
